John Shepherd created a notice COMP9315 on Sun 10 April 2022 at 09:58:53 PM.

Assignment 2 Testing Script

I've put a simple testing script in the assignment directory. You can run it as

```
sh /web/cs9315/22T1/assignments/ass2/tests.sh
```

but you will need to do some setting up first.

You can run **tests.sh** in any directory but ...

- the directory must contain a file called **ass2.zip** , containing the files you intend to submit
- the script will create a subdirectory called **testing** in this directory

Hopefully it will run on any CSE machine (vxdb, vlab, williams, etc.).

Note that because of the variations in how people implement splitting, etc. It does not give precise expected outputs for the **stats** executable. The queries, however, should match their expected outputs exactly.

The script produces a lot of output. I would suggest redirecting the script's output to a file and then perusing the file in a text editor.

If you want to see what the data files look like, they live in the directory

```
/web/cs9315/22T1/assignments/ass2/test-files
```

I'd suggest creating a new directory, separate from the directory where you're working on the assignment, put the **ass2.zip** file in that directory and runs **tests.sh** in that directory.
